

V4 Revision 6/8/2026

These updates are intended to improve health literacy, appointment preparation, self-advocacy, and usability while minimizing user burden prior to launch.

Commented [1]: NOT FIXED..... COULD NOT FIND THIS IN THEAPP

TODAY'S GUIDANCE Requested update: Please simplify the card copy and reduce the card height. | |

Today's Guidance

- Understand your care, prepare questions, and find support.
- See options →

This si the language i need in the today's guidance....we can leave the emoji

Commented [3]: This si the language i need in the today's guidance....we can leave the emoji @grace-s@the-culture-connection.com
Assigned to grace-s@the-culture-connection.com

3. Trimester / Learning Center Card The large purple trimester card is visually strong, but it takes up too much space on the home screen. Requested update: Please convert this into a shorter learning card. Week 38 • Third Trimester (or whatever week the mama is) What to expect this week, what to ask, and when to call your provider. Open Learning Center → PARTIALLY FIXED - PLEASE ADD THIS VERBIAGE IN YELLOW. THE RIGHT PIC IS THE UPDATED ONE. THE LEFT IS THE OLD		Commented [4]: PARTIALLY FIXED - PLEASE ADD THIS VERBIAGE IN YELLOW. THE RIGHT PIC IS THE UPDATED ONE. THE LEFT IS THE OLD. @grace-s@the-culture-connection.com _Assigned to grace-s@the-culture-connection.com_
Under “My Visits” it still says loading. FIXED		
Find your Care Team Requested Update Please allow provider search to function as a universal search. The system should return matching results regardless of provider type. Provider specialty filters can remain available as optional filters but should not be required before searching. PARTIALLY FIXED - THIS NEED TO BE UPDATED. ITS STILL RETURNS TO PICK A SPECIALTY. EVEN THOUGH IT SAYS OPTIONAL		Commented [6]: PARTIALLY FIXED - THIS NEED TO BE UPDATED. ITS STILL RETURNS TO PICK A SPECIALTY. EVEN THOUGH IT SAYS OPTIONAL

Learning Module Feedback & Care planning tools etc. – Keep It Simple Requested Update Please place this feedback immediately after module completion rather than low on the page where it may be overlooked. After learning modules Did this help? ❤️ I understand it better now 😊 It helped a little 😐 I still have questions After care planning tools, birth planning, or checklists How do you feel now? 🌟 I feel more prepared 😊 A little more prepared 😐 Still unsure PARTIALLY FIXED. COULD NIT FIND THE HIGHLIGHTED	 Commented [12]: PARTIALLY FIXED. COULD NIT FIND THE HIGHLIGHTED Formatted: Highlight Formatted: Highlight

Journal Auto-Categorization Enhancement Requested Update (the plus sign next to hospital admission brings up the tag note feature)

When users save content from educational modules, advocacy prompts, rights content, or provider questions, please automatically categorize the journal entry based on the section where the content originated.

Examples:

Know Your Rights

→ Rights & Self-Advocacy

Questions to Ask

→ Questions for My Provider

Birth Preferences

→ Birth Preferences

Labor & Delivery Education

→ Labor & Delivery Questions

Health Made Simple

→ Health Information I Want to Remember

Emotional Support

→ Emotional Reflection

Goal

Users should not have to manually organize every saved item. The app already knows the content source and can help keep journal entries organized automatically.

FIXED

Commented [13]: FIXED

Formatted Table

AI Assistant Intro Card – UX Review Observation

The AI Assistant introduction card remains fixed and visible during the chat experience.

While the information is helpful initially, it occupies a large portion of the screen after the user begins interacting with the assistant.

Requested Update

Please review options to make the AI Assistant introduction less intrusive after the user begins chatting.

(Preferred)

Allow the introductory information card to be dismissed.

Example:

- Add an X icon to close the card
- Once dismissed, the card remains hidden for future sessions unless reset

The primary focus of this screen should be the user's questions and the assistant's responses.

NOT FIXED - UNABLE TO FIND THE AI ASSISTANT

Commented [14]: NOT FIXED - UNABLE TO FIND THE AI ASSISTANT

User Testing Findings – Community & Mama Approved™ Alignment

Community + Mama Approved™ Workflow Alignment

Issue Identified

Current testing revealed that the relationship between Community, Provider Reviews, and the Mama Approved™ system is not clear to users.

At present, these features appear as separate experiences:

- Community posts and discussions
- Provider reviews
- Mama Approved™ badges and filters
- Provider search

Users may not understand that community feedback contributes to provider reviews and ultimately informs the Mama Approved™ designation.

Recommended Workflow

Community Experience

↓

Share Provider Experience

↓

Provider Review Submission

↓

Provider Trust Score

↓

Mama Approved™ Badge

The user journey should clearly communicate that sharing experiences helps other mothers identify providers who are respectful, supportive, and culturally responsive.

NOT FIXED - WHEN I CLICK ON REVIEW, IT MAKES YOU FIND THE DOCTOR AND SPECIALTY LIKE FIND A PROVIDER. ALSO CAN YOU FIX THE COMMUNITY WITH THE Y HANGING AS WELL AS MINIMIZE THOSE BOXES AND PUT TOWARDS THE BOTTOM SINCE YOU HAVE TO SCROLL TO FIND THE REVIEW

Community Section Revision

Replace:

"Help another mama"

With:

"Help Another Mama Choose Care"

Suggested description:

"Share your experience with a provider, hospital, doula, or birth team. Your feedback helps other mothers find care where they feel heard, respected, and supported."

Suggested CTA:

♥ Share Provider Experience

PARTIALLY FIXED SEE ABOVE. THE LANGUAGE IS THEE BUT IT GETS STUCK IF YOU DONT KNOW THE PROVIDER TYPE

Provider Review Integration

Provider review submissions should be considered the primary source of Mama Approved™ qualification.

Current review questions already support this model:

- I felt heard
- I felt respected
- Things were explained clearly

These responses should contribute to provider trust indicators and Mama Approved™ scoring.

PATRALLY FIXED - THE REVIEWS WORKHOWEVER WHE I CLICK ON FIND CARE TEAM THE BANNER IS FIXED, CAN WE MAKE IT MOVE SO HALF THE SCREEN IS NOT TAKEN UP.

Commented [17]: PATRALLY FIXED - THE REVIEWS WORKHOWEVER WHE I CLICK ON FIND CARE TEAM THE BANNER IS FIXED, CAN WE MAKE IT MOVE SO HALF THE SCREEN IS NOT TAKEN UP.

Community Feedback Survey Review

Current community survey items focus on community participation:

- I feel supported by this community
- I feel heard when I share something here

Recommend evaluating whether these questions align with EmpowerHealth Watch's primary mission of:

- Health literacy
- Care navigation
- Patient advocacy
- Support resource access

Alternative survey items may include:

- This app helped me understand my care.
- This app helped me prepare for an appointment.
- I found information that was useful to me.
- I would recommend this app to another mother.

FIXED

A screenshot of a mobile app showing a 'Community Feedback' survey modal. The modal has a purple header with the title and a close button. Below the header, it asks the user to rate their experience from 1 (Strongly Disagree) to 5 (Strongly Agree). Two survey items are visible: 'I feel supported by this community.' and 'I feel heard when I share something here.' Each item has a rating scale with four buttons (1, 2, 3, 4). The '4' button for the first item is selected. At the bottom is a 'Submit' button.

UI Priority

Priority fixes identified during testing:

1. Fix provider profile rendering issues affecting visibility of Mama Approved™ badges.
2. Create explicit navigation between Community → Reviews → Mama Approved™.
3. Reposition Community contributions as provider experience sharing.
4. Clarify the purpose and value of Mama Approved™ throughout provider search and provider profiles.
5. Ensure Mama Approved™ is presented as a core trust feature rather than an isolated badge.

PARTIALLY FIXED - THE Y ON COMMUNITY IS STILL BROKEN

Pregnancy Details Edit Function

Issue:

During testing I was unable to edit the Pregnancy Details section. The profile displays pregnancy information (week, due date, etc.) but there does not appear to be a functional edit workflow.

Recommendation:

Please verify that users can update:

- Due date
- Current pregnancy status
- Pregnancy stage/week (if recalculated from due date)
- Other pregnancy-related profile information

If editing is already available, please make the entry point more visible. If not, an edit workflow should be added since this information drives personalized content throughout the app.

NOT FIXED

Support Workflow Visibility

Issue:

The Support feature (💜🧡 icon) is difficult to discover because there is no label or explanation describing its purpose.

Recommendation:

Improve discoverability by adding one of the following:

- Label beneath the icon ("Support" or "Get Support")
- First-time user tooltip explaining the feature
- Dedicated support card within the AI Assistant screen

Goal:

Users should immediately understand that this feature provides emotional support resources, self-care tools, and additional support pathways.

NOT FIXED - CANNOT FIND THE AI ASSISTANT

My Visits Screen – Reduce Introductory Content Issue:

The My Visits screen currently contains multiple large informational cards before users reach their visit content. During testing, the page feels text-heavy and explanation-focused rather than action-focused.

The current support card and educational card take up significant screen space and may distract from the primary purpose of the page, which is viewing and managing visit summaries.

Reduce card height. Reduce explanatory text.

Surface user content faster.

Suggested layout:

My Visits

Dec 17, 2025

Hospital Admission Checklist

Dec 5, 2025

Prenatal Visit

Nov 18, 2025

Nutrition Counseling

FIXED

My Visits Detail Screen Issue

The current Visit Summary screen contains multiple oversized cards and explanatory sections that take up significant screen space before users reach the actual visit summary.

Examples:

- Large purple date card
- "About this summary" section
- Large disclaimer card

The result is that users must scroll through explanatory content before accessing the information they came to view.

Recommendations:

1. Reduce the size of the purple summary header card.
2. Replace the large "About this summary" card with a single-line disclaimer.
3. Prioritize displaying visit summaries immediately upon entry.
4. Convert educational explanations into expandable sections rather than permanent large cards.
5. Adopt a content-first approach so users can quickly locate and review past visits.

NOT FIXED

Create Post Screen – Reduce Over-Explaining Before Action

Issue

The Create Post screen currently includes a large privacy/instruction card, oversized category buttons, large form fields, and significant spacing before the user can begin writing.

This creates visual fatigue and may make posting feel harder than it needs to be.

Health Literacy Design Rule

Please apply this rule across the screen:

One screen = one primary action.

For this screen, the primary action is:

Create a post.

Everything else should support that action without overwhelming the user.

If the user has to read more than 1–2 short sentences before starting the action, the screen is likely over-explaining.

Requested Updates

Please simplify the Create Post screen by:

- Replacing the large privacy notice with one short sentence.
Suggested copy:
Community posts are public. Please avoid sharing private health details.
- Reducing the size and spacing of the category buttons.
- Keeping the category options, but making them more compact:
 - Questions
 - Birth Stories
 - Support
 - Resources
- Simplifying field labels and placeholder text.
Suggested:
 - Title: **Add a title**
 - Content: **Write your post**
- Moving the title and content fields higher so users can begin writing sooner.

Goal

Reduce cognitive load, improve readability, and help users create posts quickly and confidently. The screen should feel simple, calm, and action-focused.

NOT FIXED

Commented [24]: NOT FIXED

Learning Center Simplification Issue

The Learning Center prioritizes pregnancy tracking and explanatory content over learning content. Large cards, oversized progress displays, and excessive spacing require users to scroll before reaching educational materials.

Recommendations

- Reduce the Third Trimester progress card by approximately 70–80%.
- Display pregnancy status as a compact banner rather than a feature card.
- Move learning modules closer to the top of the page.
- Reduce the size of filter tabs and category controls.
- Remove or shorten explanatory text that delays access to learning content.
- Prioritize actionable learning modules over pregnancy tracking information.
- Allow users to see multiple learning modules on screen without scrolling.

Broader design rule for EmpowerHealth Watch should be:

Show the action first. Explain only when needed.

Right now many screens are doing the opposite: explaining first and making users work to reach the action. For a health literacy app, reducing cognitive load is often more valuable than adding more guidance

NOT FIXED

Journal Screen Simplification

Issue

The Journal screen currently dedicates significant space to explanatory content before users can begin journaling or review previous entries.

Recommendations

- Replace the large privacy card with a small "🔒 Private to you" indicator.
- Reduce introductory text and instructional messaging.
- Move journaling actions and recent entries higher on the page.
- Prioritize writing, mood tracking, and journal history over explanatory content.
- Reduce oversized cards and excess vertical spacing.
- Allow users to immediately see both the journal prompt and previous entries without excessive scrolling.

Health Literacy Goal

The Journal should feel personal, calm, and easy to use. Users should be able to begin writing or review past reflections within seconds of opening the screen, with minimal instructional content competing for attention.

NOT FIXED

Design principle for EmpowerHealth Watch is: If a card explains a feature instead of helping the user use the feature, it should be reduced, collapsed, or removed.

Commented [27]: Design principle for EmpowerHealth Watch is:

Assigned to grace-s@the-culture-connection.com

Commented [28]: NOT FIXED

Bottom Navigation Label Visibility Issue

The "You" label in the bottom navigation is partially cut off and not fully visible on some screens. This creates a visual quality issue and may reduce clarity for users navigating the app.

Requested Fix

Please review the bottom navigation layout and ensure all navigation labels display completely across supported screen sizes and device types.

Global Responsive Layout Review

Please conduct a full review of screen layouts across the app for:

- Text clipping
- Overflow issues
- Oversized cards
- Excessive whitespace
- Safe-area spacing
- Bottom navigation visibility
- Keyboard interactions
- Small-screen responsiveness

Goal: Ensure content remains readable, accessible, and visually balanced across all supported devices.
NOT FIXED

Commented [29]: NOT FIXED

Birth Plan Builder Simplification Issue

The Birth Plan Builder screen contains multiple large explanatory cards that require users to read significant amounts of content before accessing their birth plan. This creates unnecessary cognitive load and places educational messaging ahead of the primary task.

Recommendations

- Reduce or remove the large introductory birth plan explanation card.
- Replace lengthy educational content with a concise optional information link.
- Move the user's birth plan higher on the page.
- Prioritize creating, editing, and reviewing birth plans.
- Replace large reassurance cards with brief supportive messages.
- Reduce oversized cards and excessive vertical spacing.
- Allow users to see and access their birth plan immediately upon entering the screen.

Suggested Copy

Instead of:

There is no one right way to give birth...

Use:

♥ Your birth plan helps you share your preferences with your care team.

Instead of:

Plans can change, and that's okay...

Use:

♥ You can update your birth plan anytime.

Health Literacy Goal

Users should be able to access, review, and update their birth plan within seconds of opening the screen. Educational content should support the experience without delaying access to the primary task.

NOT FIXED

Know Your Rights Visibility Enhancement Observation

The Know Your Rights content strongly aligns with EmpowerHealth Watch's mission of health literacy, self-advocacy, care navigation, and emotional safety. However, the content is currently nested within the Learning Center and may be difficult for users to discover.

Recommendation

Elevate Know Your Rights from a secondary learning topic to a core empowerment feature.

Potential approaches include:

- Home screen quick access section.
- Rotating rights and advocacy tips on the home screen.
- Direct integration with AI Assistant responses.
- Dedicated navigation entry for Rights or Advocacy.
- Featured placement alongside care summaries and support tools.

Rationale

Understanding personal rights in healthcare is foundational to self-advocacy, informed decision-making, respectful maternity care, and emotional safety. Increased visibility would better align the user experience with EmpowerHealth Watch's mission and intended outcomes.

Strategic Goal

Move rights education from a passive learning resource to an actively visible empowerment tool that users encounter throughout their journey.

NOT FIXED

Learning Center Layout Optimization

Observation

Current learning content is displayed primarily through large card-based modules. While visually attractive, the card size significantly limits content visibility and requires extensive scrolling to discover available topics.

Recommendations

Reduce reliance on large module cards

- Convert learning modules into compact list items or smaller cards.
- Allow multiple topics to appear on screen simultaneously.
- Prioritize content discovery over decorative spacing.

Reassess Learning Center filters

- Review the purpose of All, Learning Modules, Next Steps, and Archived.
- Simplify or consolidate filters that appear functionally similar.

Reduce trimester card prominence

- Convert the trimester tracker into a compact informational element.
- Reserve screen space for educational content.

Increase content visibility

- Allow users to scan multiple learning topics without excessive scrolling.
- Organize modules into clear topic sections such as:
 - Birth & Hospital Basics
 - Know Your Rights
 - Self Advocacy
 - Emotional Wellbeing
 - Postpartum Preparation

Health Literacy Rationale

Users should be able to quickly identify and access relevant information without navigating through large visual elements. A more compact, content-first design reduces cognitive load, improves discoverability, and supports EmpowerHealth Watch's goals of health literacy, self-advocacy, and care navigation.
